

PYTORCH WORKSHOP DOC

**Intel oneAPI Hands-on workshop using Intel® Extension
for PyTorch (IPEX)**

18th August 2021

Setup Instructions:

1. Open the terminal and clone github repository using following command:
`git clone https://github.com/asirvaiy/pytorch_workshop.git`
2. Change working directory to pytorch_workshop:
`cd pytorch_workshop`
3. Unzip both the zipped files, resnet50_training and resnet50_inference:
`unzip resnet50_training.zip`
`unzip resnet50_inference.zip`
4. Now we should be able to see [resnet50_training](#) and [resnet50_inference](#) directories created.
5. Open [resnet50_training](#) directory and double click on [resnet50_training.ipynb](#) to open the training notebook.
6. Make sure to select [PyTorch 1.4.0 \(AI kit\)](#) kernel. Check the figure given below to know how to change the kernel.
7. Similarly, after finishing [resnet50_training.ipynb](#) do the same with [resnet50_inference.ipynb](#) in [resnet50_inference](#) directory.

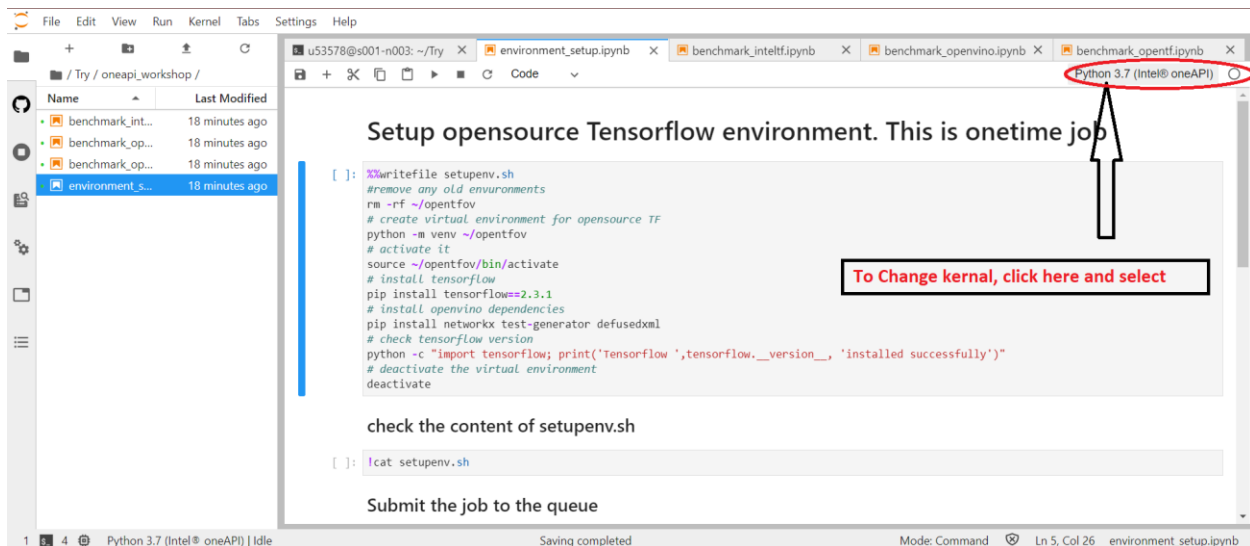

Figure: How To change the kernal
